Full-Arch Implant Patient Education

Patient Education & Acknowledgment Form

This document has been reviewed with you by your Pulver Oral Surgery care team. It covers important information about your upcoming surgery, post-operative diet, your temporary bridge, options for your final bridge, and follow-up protocol. Please read each section carefully and ask any questions before signing.

SECTION 1 — SURGICAL CONSIDERATIONS

Your surgeon will explain all aspects of your procedure in advance. Key points to be aware of:

- Bone removal may be necessary to achieve proper implant dimensions and optimal aesthetics.
- If bone quality is insufficient to secure implants at adequate force, a removable denture will be required during the healing period (typically 4–6 months).
- While implant integration is highly successful, outcomes cannot be guaranteed in every case. Just as natural teeth can fail, dental implants carry a risk of a less-than-ideal result. Every effort will be made to achieve an excellent outcome, and your Pulver Oral Surgery team will support you at every step.

SECTION 2 — YOUR TEMPORARY BRIDGE

- The temporary bridge will not extend as far back as your final bridge.
- It is not reinforced with titanium metal and is susceptible to fracturing under excessive force.
- A strict soft-food diet is essential for the first 4–6 months. Failure to follow this diet could result in bridge fracture or total implant failure.
- Your surgeon must clear you before returning to a normal diet.

SECTION 3 — AESTHETICS & SPEECH

- The bridge may extend slightly toward the palate or reduce tongue space. This is typically improved with the final prosthesis.
- In some cases, this anatomical change may initially affect speech. Most patients adapt over time. Permanent changes are rare but possible.
- A facial shelf may be present in your final restoration that will require cleaning. All efforts will be made to reduce it in mock-up planning.

SECTION 4 — APPOINTMENT EXPECTATIONS

- Your surgical appointment may take most of the day. Please plan accordingly.
- Your transportation provider should leave a contact number and return near case completion. Contact information must be on file before you leave.
- Multiple post-operative visits with both the surgical and restorative team are required over the first 6 months.

SECTION 5 — RECOVERY & LONG-TERM HYGIENE

- Post-operative hygiene appointments begin 3 months after delivery of your final prosthesis. At this visit, the prosthesis will be removed, tissue evaluated, and a long-term care protocol established.
- Ongoing hygiene visits will include prosthesis removal, tissue evaluation, and radiographs.
- Lifelong oral hygiene maintenance is essential — just as natural teeth require routine dental care.

SECTION 6 — YOUR FINAL PROSTHESIS

- The final prosthesis will be fabricated after the 2–6 month healing period and typically takes 1–3 months to complete.
- In some cases, the final prosthesis can take up to — or more than — 12 months.
- A custom night guard will be provided with your final prosthesis and must be worn nightly unless otherwise directed.

IMPLANTED WISDOM

866-IMPLANT • implantedwisdom.com • Highland, IN

- Over time, wear from grinding or natural use will require prosthesis re-engineering. On average, this occurs every 7–12 years, though individual timelines vary. There will be an additional cost for this service.
- When re-engineering is needed, your transitional prosthesis will be used temporarily. You are responsible for safeguarding this prosthesis.

SECTION 7 — PROSTHESIS MATERIAL OPTIONS

- Acrylic-metallic hybrid prostheses are the standard option and provide excellent functional results.
- Full metal-ceramic restorations may result in fewer fractures and less wear than acrylic-hybrid solutions. This option is available at additional cost.
- Note: ceramic restorations may cause accelerated wear on opposing natural teeth.
- Your care team will review all options with you to help you make an informed decision.

Important: Failure to adhere to your surgeon's post-operative instructions — including the soft-food diet, night guard use, and hygiene appointments — may result in implant or prosthesis failure. Additional costs will apply for repairs or replacement caused by non-compliance.

PATIENT ACKNOWLEDGMENT & CONSENT

By signing below, I confirm I have read, understood, and agree to all sections of this form. I have had the opportunity to have all my questions answered by my Pulver Oral Surgery care team. I understand my alternative options, the associated risks, and potential outcomes of this procedure, and I wish to proceed.
